1 What will be the output of the following code snippet? def func(a, b): return b if a == 0 else func(b % a, a) print(func(30, 75))a) 10 b) 20 c) 15 **d**) **0** Ans-> c2 numbers = (4, 7, 19, 2, 89, 45, 72, 22) $sorted_numbers = sorted(numbers)$ even = lambda a: a % 2 == 0 even_numbers = filter(even, sorted_numbers) $print(type(even_numbers))$ a) Int b) Filter c) List d) Tuple $Ans \rightarrow b$ 3) As what datatype are the *args stored, when passed into a) Tuple b) List c) Dictionary d) none Ans -> a 4) $set1 = \{14, 3, 55\}$ $set2 = \{82, 49, 62\}$

set3={99,22,17}

print(len(set1 + set2 + set3))
 a) 105 b) 270 c) 0 d) Error
Ans-> d
5) What keyword is used in Python to raise exceptions?
a) raise
b) try
c) goto
d) except
Ans-> a
6) Which of the following modules need to be imported to handle date time computations in Python?
a) timedate
b) date
c) datetime
d) time
Ans-> c
7) What will be the output of the following code snippet?
print(4**3 + (7 + 5)**(1 + 1))
 a) 248 b) 169 c) 208 d) 233
Ans-> c
8) Which of the following functions converts date to corresponding time in Python?
a) strptime
b) strftime
c) both a) and b)
d) None
Ans-> c

9) The python tuple is _____in nature.

a) mutable

b)immutable

c)unchangeable
d) none
Ans-> b and c
10)
Theis a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop.
A. range()B. set()C. dictionary{}D. None of the mentioned above
Ans-> A
Question 11
Amongst which of the following is a function which does not have any name?
A. Del functionB. Show functionC. Lambda functionD. None of the mentioned above
Ans-> C
Question 12
The module Pickle is used to
 A. Serializing Python object structure B. De-serializing Python object structure C. Both A and B D. None of the mentioned above
Ans-> C
Question 13
Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?
 A. set() method B. dump() method C. load() method D. None of the mentioned above

Ans-> B

Amongst which of the following is / are the method used to unpickling data from a binary f	ile?
A. load() B. set() method C. dump() method	
D. None of the mentioned above	
Ans-> A	
15.	
A text file contains only textual information consisting of	
A. Alphabets B. Numbers	
C. Special symbols	
D. All of the mentioned above	
Ans-> D	
16	
Which Python code could replace the ellipsis () below to get the following output? (Select all tapply.)	hat
captains = {	
"Enterprise": "Picard",	
"Voyager": "Janeway",	
"Defiant": "Sisko",	
}	
Enterprise Picard,	
Voyager Janeway	
Defiant Sisko	
a) for ship, captain in captains.items():	
print(ship, captain)	
b) for ship in captains:	
<pre>print(ship, captains[ship])</pre>	

c) for ship in captains:

```
print(ship, captains)
d) both a and b
Ans-> d
```

Which of the following lines of code will create an empty dictionary named captains?

```
a) captains = \{dict\}
```

- b) type(captains)
- c) captains.dict()
- d) captains = {}

Ans > d

17)

18) Now you have your empty dictionary named captains. It's time to add some data!

Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway", and "Defiant": "Sisko".

Which of the following code snippets will successfully add these key-value pairs to the existing captains dictionary?

```
a) captains{"Enterprise" = "Picard"}
captains{"Voyager" = "Janeway"}
captains{"Defiant" = "Sisko"}
b) captains["Enterprise"] = "Picard"
captains["Voyager"] = "Janeway"
captains["Defiant"] = "Sisko"
c) captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
}
```

d) None of the above

19) You're really building out the Federation Starfleet now! Here's what you have:

```
captains = {
    "Enterprise": "Picard",
    "Voyager": "Janeway",
    "Defiant": "Sisko",
    "Discovery": "unknown",
```

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

```
a) for item in captains.items():
    print(f"The [ship] is captained by [captain].")
b) for ship, captain in captains.items():
    print(f"The {ship} is captained by {captain}.")
c) for captain, ship in captains.items():
    print(f"The {ship} is captained by {captain}.")
d) All are correct
Ans-> b
```

You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:

```
captains = {
    "Enterprise": "Picard",
    "Voyager": "Janeway",
    "Defiant": "Sisko",
    "Discovery": "unknown",
}
```

20)

What statement will remove the entry for the key "Discovery"?

- a) del captainsb) captains.remove()c) del captains["Discovery"]d) captains["Discovery"].pop()

Ans-> c
